

# LIMB SAW

## A CUT

ABOVE AND BEYOND

# Job Done Right.

Overhanging limbs can take over trails and fence lines. Now you can recover lost ground by limbing and trimming from the seat of your tractor or skidsteer.

The HLA Limb Saw is a hydraulically powered 25" chain saw on a spring tensioned arm. With a total 14' reach you may have the ability to extend over 20' depending on your loader height. The Limb Saw's boom also allows you to reach over ditches and other obstacles and get to those hard to reach branches.

Gain access to valuable land and potentially increase yield from your fields. Tame unruly fence rows, allowing large equipment to get into all areas of your fields and prevent equipment damage from overhanging branches.

Eliminating ladders and climbing, you and your HLA Limb Saw will make short work of tall jobs.

Specifications	HLS1224
Hydraulic Flow	15 GPM @ 3000 PSI
RPM	2550 @ 15 GPM
Power	22 HP
Torque	45 ft-lb
Reach	Up to 14' reach with spring tension cut assist
Saw	Standard Stihl 25" guide bar and saw chain for easy replacement
Chain Oiler	Automatic Chain Oiler
Weight	395 lbs (approx.)
Boom Pole (Saw)	4' (3 position pivot stop)
Boom Pole (Main)	12' (3 position)

## Cutting Bar

Using standard bars and chains makes it easy to find replacements, allowing you to trim those hard to reach places. Chainsaw cover included.

## Hydraulically Driven

A hydraulic motor runs the chain saw at 2550 RPM. An adjustable bleed off screw siphons from the hydraulic system to lubricate the chain.

## Optional Reach

The Limb Saw mast can be arranged in one of 3 mount locations for optimal placement. Combined with the height of your loader arms the Limb Saw may reach up 20'.
